

## Udzungwa (10.01.2011 to 12.31.2011)

**Year:**

2011

**Quarter:**

October - December

**Communications activities:**

Tanzania National Parks - TANAPA board of Trustees- visited our field station and Emanuel Martin, the Site Manager, had a chance to brief them about TEAM core activities. Importantly he informed them about two more images of Serval cat (*Felis serval*) and March cane-rat (*Thryonomys gregorianus*) which were not photographed before using the camera traps in Udzungwa. This brings to a total of 30 species of vertebrates so far trapped in our camera traps in Udzungwa.

**Unusual Events at the TEAM Site:**

None

**New Species:**

None

**Protocol Activities:**

This quarter saw a successful completion of data collection mainly on terrestrial vertebrate and vegetation. The data have been also uploaded into TEAM website successfully.

**Protocol Problems:**

There has been no any problem related to protocol in this quarter.

**Schedule Problems:**

None

**Logistical Problems:**

None

**Suggestions:**

None
